THE MOMA GROUP PRESENTS THE PARTIAL INSTALLATION OF PHOTOVOLTAIC PANELS ON THE SASSUOLO ESTABLISHMENT

With great pride, the MOMA Group has officialised the end of the first part of the installation of photovoltaic panels.

The works, which started in January 2022 and ended in August, will bring a contribution in terms of energy from renewable sources and, consequentially, a reduction of energetic consumption.

Speaking of numbers, the power of the plant is equal to 500,250 KWh and it estimates a production of annual electric energy of 587.279 KWh from entirely renewable resources.

Regarding the environmental benefits, the reduction of CO2 emissions is equal to 210.905 Kg, which amount to around 6.295 trees planted.

"Another step towards sustainability" declares the CEO Renzo Vacondio, "Respecting the environment has always been a priority of ours: for years we have been investing continuously in improving the processes on all levels and we will not stop here".

Cordiali Saluti,
